

AMAZING FOOTPADS

Making a Difference One Child at a Time

OUR TESTIMONIALS

"I have a six year old little boy who was diagnosed with autism spectrum disorder three years ago. Before trying amazing footpads my son spoke mostly what is often described as unidentifiable jargon or what I like to refer to as jabbering. He could express his wants and needs with only 2-3 word sentences but beyond that most of what he said was not understandable. While my son has made a lot of progress over the last three years, the progress he has made since using amazing footpads a month ago is nothing short of a miracle. Immediately after using amazing footpads my son looked better rested and his world just seemed to get clearer with each passing day. Everyday he spoke more and more words and what he was saying was clear and understandable, now when he speaks he's able to express himself by using 4-6 word sentences. He started school last month and in the first few weeks his teacher could not believe how much he had progressed over the summer; at the end of school last year they were not able to test him because he had refused cooperate and now just three weeks into this school year they were able to test him in both math and reading. He scored 100% on his math test and in his reading, he was reading at a level four. They are now transitioning him into a regular 1st grade classroom and his teacher feels that if he continues to make the progress he's making he'll be able to be in a regular 2nd grade classroom full-time next year with a part-time TA. My son doesn't even come close to comparing to the little boy he was three years ago and in the last month he doesn't compare to the little boy he was three months ago. For my son, amazing footpads are amazing." — Diane R.

Our 10 year old boy with Autism has had amazing results. His eyes have cleared up, much better eye contact. He eats fruits that he would not touch before using amazing footpads. Other benefits from using amazing footpads are: improved listening, deeper sleeps, bed wetting has reduced dramatically, increased social behavior with his brothers and sister, in fact, he now comes up and kisses his baby sister. Also his teachers have noticed big improvements in his attention span and behaviors. All that since using amazing footpads for the last 2 months. — Marcus & Lisa M.

A 5 year old girl with severe Autism came to my office for an examination. Immediately, she pushed all the items on my desk on the floor, bit me and jumped up on my desk, clearly out of control. Her parents are both middle school teachers and they explained that their daughter has not slept for no more than half hour increments for years. I could tell they were at their wits end, looking for any help they could get. I gave them a sample of Amazing Footpads and they drove back to their home one hour away. The very next day they drove back to my office wanting more footpads. Saying they put the footpads on their daughter before bed and **she slept for 8 hours straight**. The parents were blown away at the results and want to continue treatment with Amazing Footpads. — Maureen P. Ed.S. AACBIS

I just started using Amazing Footpads this week on my two and a half year old son with Autism. Immediately I noticed improvements in his speech. He can now pronounce the letter P, he has had trouble with that for a while. He can now walk backwards and he's eating foods that he did not prior to using Amazing Footpads. — Tamara V.
